

**X SERIES® ADVANCED**

# Because Children Are Not Small Adults

Too often, medics have no choice but to adapt their equipment to treat sick or injured children. With the X Series® Advanced monitor/defibrillator, medics can optimize their treatment of young patients with specific modes for pediatrics and neonates.

## Distinct Pediatric and Neonatal Modes

Children require specialized monitoring and defibrillation capabilities. The X Series Advanced automatically lowers the energy level of the shock and activates a pediatric-specific arrhythmia analysis algorithm simply by connecting to ZOLL® pediatric electrodes.

## Pediatric CPR Feedback

To maximize CPR performance, the X Series Advanced CPR Dashboard™ displays the actual depth and rate of compression delivery in real time.
